

Performance Tracker

Performance Tracker is the premier assessment management solution for tracking and analyzing student achievement. This powerful application provides educators a single location to easily access national, state and local assessment data along with essential student information.

Functionality

Features:

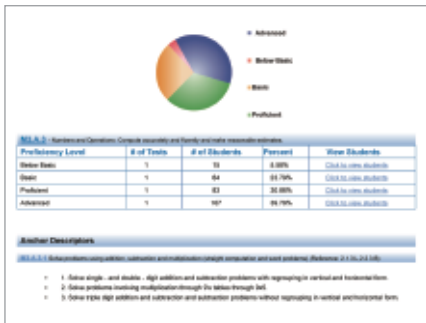

- 100% Web Technology
- Intuitive to Use
- Easy to Access
- SIF Compliant

Reporting: The reporting power contained in Performance Tracker can have a tremendous positive impact. With just a click, a teacher or administrator can view a student's entire assessment history on one screen. Traffic light indicators make it easy to quickly summarize proficiency levels or spot students in need of academic intervention. Dealing with mountains of data can be time and resource intensive; Performance Tracker makes it simple to filter and analyze data by school, teacher, class, student, or demographic groups. Users can also create student groups for more specific research.

SIF-certified: As important as it is for data to be easily organized for analysis, it is also equally important to be able to share data with other deployed systems. Performance Tracker is SIF 2.0 certified, making automatic sharing of data with other SIF compliant applications a reality. Changes to information vital to other applications populate as they happen, and likewise, Performance Tracker receives changes made in other applications.

Professional Development: Getting quick access to student performance data is a huge step toward building a data-informed culture. To put this data to use, educators need more than software. All of our educational consultants have the experience and knowledge to provide educators with the guidance and tools needed to create a successful, data-informed culture.

Performance Benchmarks: Standards-driven education is becoming increasingly important to instruction. Performance data without relation to established, common standards loses value. Performance Tracker makes it easy for educators to align performance results to the established standard. With student, school, and district performance history readily available, administrators can quickly identify problem areas and swiftly implement solutions. Performance Tracker also enables educators to create reports meeting NCLB requirements.

Action	Subject Area Name	Number of Standards
Click to View	Arts and Humanities	82
Click to View	Career Education and Work	0
